

SUMMARY

Frontend Engineer focused on complex **B2B React/Next.js products**, building scalable systems with **FSD, micro-frontends, and performance-first architecture** for maps, commerce, and data-heavy SaaS. Experienced in **AI-native frontend development**, including **Generative UI, MCP tools, agentic workflows, and Vercel/OpenAI SDK integrations**.

EXPERIENCE

Senior Frontend Developer – [Bulut](#)

June 2025 – Present

- *Bulut is a B2B ERP company.*
- Own Route Manager (**OptimoRoute**-class logistics UI): MapLibre map, multi-stop routing, **scheduling**, and **WebGL** micro-interactions.
- **Architected the Sale Platform Admin** using **Nx monorepo + Rspack Module Federation**, isolating applications and developer ownership while enabling independent deployments, shared packages, and **faster incremental builds**.
- Drove a **70% memory optimization** improvement on Route Manager while scaling it into a production OptimoRoute-class logistics UI (MapLibre, multi-stop routing, scheduling, WebGL) holding ~94 routes / ~3,700 invoices via **clustering, virtualized timelines**, narrow Zustand subscriptions, and parallel **OSRM**.
- Split product surfaces with **FSD** and shared UI contracts so features ship without a **props monolith**.
- Implement ERP **micro-frontends** with **Rspack Module Federation**: independent remotes, shared runtime, isolated deploys.
- Ship Customer Panel commerce flow (catalog, cart, orders) on **TanStack Query** with explicit **cache** and **invalidation**.
- Standardize **agentic AI** delivery (**Cursor/Claude** skills, rules, plan-to-implement loops) so generated code matches **FSD boundaries**.
- Built a company-wide icon pack package with **React component** support for consistent, **reusable** icons across products.

Freelance Frontend Developer – [Self Employed](#)

Feb 2025 – June 2025 (5 mos)

Independent frontend and web development for client projects.

- Built a **realtime** melted-gold selling platform for the local Tabriz gold bazaar — **live pricing/trading** flows for sellers and buyers — powered by **WebSockets** and a realtime UI that updates without full page reloads.
- Shipped a full Next.js e-commerce website end-to-end: App Router pages, **SSR/SSG** product routes, server/client component split, cart + catalog + checkout, image optimization, nested layouts, loading/error UI, and the core buyer flows a storefront needs.
- Developed **investisor.com** with a rich admin panel using **CKEditor** for content editing, SSG/SSR rendering, and Next.js **Server Actions** for **form/mutations** beyond a static marketing site.
- Owned delivery end-to-end for client frontends — scope, UI implementation, and handoff of production-ready interfaces.

Senior Frontend Developer – [PrimePropertyTurkey](#)

July 2024 – March 2025 (9 mos)

*Istanbul's Premier **Real Estate** Agency. Your trusted partner for buying, selling, and investing in properties..*

- Implemented the public property platform in Next.js, structuring pages and data fetching for a **large** real-estate catalog.
- Used **SSG / SSR** so thousands of properties load in **seconds** — **pre-rendering** listing and detail routes at build/request time instead of slow **client-only** fetches.
- Added **i18n** so buyers and investors can browse the catalog in **multiple** languages without separate sites.
- **Owned** frontend delivery for listing discovery and property detail experiences **aligned** with agency **sales** and **investment** flows.

EDUCATION

Computer Engineering | Technical University of Tabriz | 2022 - 2027

TOOLS

React / Next.js | TypeScript | FSD Architecture | Micro-frontends | TanStack Query | Zustand | Rspack Module Federation MapLibre WebGL | Shadcn | Go | Generative UI | Cursor / Claude | Agentic AI Dev

SOFT SKILLS

Technical Leadership | System Thinking | Problem Solving | Cross-functional Collaboration | Technical Communication | Ownership | Mentoring | Continuous Learning

LANGUAGES

English —> Advanced
